Musculoskeletal Ultrasound Imaging

Speaker

Professor Thomas B. Clark

DC, RVT, RMSK

Professor Thomas Clark, Master Anatomist and Musculoskeletal Sonographer, was awarded the “Pioneer Status” by the American Registry for Diagnostic Medical Sonography. He is an internationally renowned author and presenter of musculoskeletal sonoanatomy, musculoskeletal sonopathology, and musculoskeletal ultrasound-guided needle interventions. Professor Clark has over 35 years of clinical experience, over 20 years of musculoskeletal ultrasound experience, and over 15 years of teaching experience within North America, South America, Europe, and Asia-Pacific. He holds adjunct professorship positions in the Departments of Sports Medicine (Rutgers), Pain Management (Robert Wood Johnson Medical School), and Radiology (Logan University and National University).

Professor Clark has been a continuing presenter and faculty for the following:

- Asia Pacific MSKUS
- ECOSEP (European College of Sports and Exercise Physicians)
- HKIMM (Hong Kong Institute of Musculoskeletal Medicine)
- ISSPS (International Symposium on Spine and Paravertebral Sonography)
- NWAC (Networking World Anesthesia Convention)
- NYSORA (New York School of Regional Anesthesia)
- USRA (Ultrasound for Regional Anesthesia)

Professor Clark conducts fresh cadaver injection courses, monthly regional dissection sessions, and live model musculoskeletal ultrasound diagnostic courses on a regular basis. In addition, he continues his private clinical practice at Comprehensive Pain Management Group, Illinois Bone and Joint Institute.

Professor Clark’s ultimate goal is to pass on his knowledge of sonoanatomy and needle techniques to further his concept of nerve hydrodissection. Professor Clark’s hydrodissection techniques for the treatment of nerve entrapment and his expertise in teaching percutaneous needle tenotomy for the treatment of acute and chronic tendonopathies have changed the face of regenerative medicine. Professor Clark’s innovations have enhanced myofascial therapy, neurotherapy, dry needling techniques, platelet-rich plasma injection therapy, and stem cell therapies.
